

Seminar:

Managing Business Critical Projects
*An executive seminar about Enterprise
Project Portfolio Management (EPPM)
Best Practices from Oracle*

Rid the World of Project Failure

Collaboration. Compliance. Control.

**ORACLE**
PRIMAVERA

Successful project delivery is essential to your business. Whether you are in the oil and gas, utilities, infrastructure or construction industry, it is essential to ensure consistent and successful project delivery to protect and expand your bottom line. This is equally a concern for both project managers delivering projects, as well as for top-level executives who have to ensure a risk adjusted portfolio of projects to drive the business' strategy. However, recent research shows that:

- Over 90% of companies fail to consistently deliver their projects on time and on budget all the time.
- Less than 50% of companies measure whether the project had a quantifiable return on investment.
- Only 26% of project owners/managers evaluate how effectively they have identified and managed risks.

These startling facts along with a challenging economic environment and constrained resources are driving heightened financial scrutiny for the funding, planning and execution of all major projects across the region.

We invite you to attend this executive seminar to learn more about the best practices and practical solutions adopted by leading multi-national companies that depend upon successful project delivery. Join industry thought leaders to hear about their experiences and best practices, and discuss with them how your organisation can tackle project delivery challenges in an innovative and cost-effective way.
