

NEW FEATURES

Primavera Contract Management Release 13

Oracle's Primavera Contract Management Release 13 delivers significant advances in existing functionality and introduces new functionality to extend the Primavera solution.

Oracle's Primavera Contract Management Release 13 will enable companies to deliver more projects on schedule and within scope, while reducing overall project costs. The new features included in this release are listed below:

User Interface: Oracle continues to maintain its commitment to improving the user's experience by redesigning how information is displayed.

Primavera Contract Management Release 13 focused on the following key areas:

- User Interface
- Content Repository
- Version Control
- LDAP
- Configuration Utility

- **Control Center:** Improved sleek modern look removes clutter and focuses attention on the information
- **Document Windows:** Tabbed documents and the addition of document information (Type, Number, To) allows you to always know the active document and keeps all document details on one page. Tabbed information eliminates scrolling and keeps focus on one area of screen.
- **Common Tasks:** Easy transition for users between Contract Management and P6
- **Prepare and Report Widgets:** Allows unlimited number of documents and reports without having to add the block multiple times to the Control Center via paging. Also added Daily Reports and Meeting Minutes to the Prepare Documents option
- **Project Tree:** Eliminates searching for common functions
- **Log Screens:** Layouts redesigned providing better display of data.
- **Go button:** removed to allow the selected task to be immediately performed reducing the number of clicks for the user
- **Edit Mode:** Redesigned edit screens allow users to enter information with increased speed and accuracy.
- **Save and Cancel:** Save and Cancel functions are now always available on screen at all times
- **Required Fields:** Screen indicators assist new users in learning what information is required

New Feature Benefits

- Reduced training time between Primavera P6 and Primavera Contract Management
- Common actions are easily visible via icons
- Greater column display for more flexibility in reporting on screen and sending to Excel
- Less clicking required to perform common tasks
- More secured attachment storage
- Additional options for backup of attachments
- Enhanced audit trail

Content Repository.

Primavera Contract Management. Release 13 offers a new option for storing attachments with its ability to utilize a content repository – embedded Jack Rabbit, or optional SharePoint or Oracle UCM. This provides a more structured and secure environment to store records associated with projects. The Content Repository is also used to store document versions.

Version Control

Primavera Contract Management Release 13 offers the ability to automatically version the document upon each save, or on demand from the select an action menu. Version control gives you the ability to capture the document's history, providing a complete trail over the life of the document. Each version of the document is captured as an HTML file and stored in the repository with all versions displayed on a new tab document tab called Versions. All modules come with a standard HTML version template that automatically populates User Defined Field information so no customization is required. HTML versioned documents can be printed.

LDAP

Provides LDAP authentication capabilities to existing LDAP servers and an import wizard. This connection is used to import or update users in the Contract Management administration database. Version 13 provides the ability to search LDAP servers for particular users, and the ability to map certain attributes.

Configuration Utility

This new configuration utility allows the system administrator to perform tasks from one centralized location. The interface is consistent with our utility for Oracle Primavera P6 Enterprise Project Portfolio Management, simplifying the administration process for users of both systems.

Technology Enhancements

- Support of MS SQL and Oracle databases
- Bundled Oracle XE for standalone installations
- Firefox browser support
- Single sign-on support for Oracle Technologies
- Support for application server clustering on WebLogic to provide load balancing for larger installations

Built in Language support for United Kingdom
